Dell makes no explicit, or implied warranties on any application, source(s), or scripts on our ftp servers. Your taking the copy means that you understand this. We are not responsible for the suitability/lack thereof of what we &/or others leave on our ftp machines. Public domain programs are provided "AS IS"(whether or not they include Dell modifications(as we shipped them)), and as such, are your responsibility to maintain, with respect to any copyrights/lefts that the original developer attaches to their program(s).

Computer software and written information are subject to applicable US and other copyright laws.

It is your responsibility to review the files that you download for copyright and similar claims. Dell reserves the right to to report any apparent violation of copyright and similar laws to software developers and similar laws to software developers, and others. That could include the F.B.I, and other law enforcement agencies, at Dell's discretion.

Given the nature of the software made available under this program it is hereby noted that all software, with the exception of those which contain ITAR controlled content, are being made available for general access under general technical data available (GTDA) as provided for under the U.S. Export Regulations.

Because the size of the archive and the quantity of people who use it, Dell advises all users that it is the legal obligation of the individual who accesses this archive to comply with the U.S. State Department regulations which govern the transfer of certain software products which are designed to meet military specifications (like aerial mapping) and/or used in military applications (products which contain the DES algorithm for file/data encryption).
